

Quebec 16 March 1968

Dear Friend Jim, Here are four exact positions of my observations for Comet Ikeya-Seki 1967M for EPOCH 1855

		R. A.	DEC.	MAG.
6 March at 0100 EST:		17h 16m 33s	+50° 58' 39"	+6.9
7 " 0045 "		17h 16m 38s	+52° 39' 18"	6.9
8 " 0145 "		17h 15m 49s	+54° 15' 11"	6.9
12 " 0045 "		17h 14m 59s	+60° 29' 16"	7.0

I made 13 more observations but the sky being cloudy or hazy no positions taking. I hope to send you some more soon.

As for Nova Delphin 1967 you can add 58 more observations to the report I already sent you... making a TOTAL of 101 observations if I'm not mistaken.

Have you seen any flying saucers... lately.....?  
Hope to see you in Calgary next May....

Sincerely yours  
J. Matte
