The Royal Astronomical Society of Canada encourages you to share the sky with family, friends & neighbours. Impart the excitement of astronomy—but do it safely! When using Green Laser Pointers (GLPs) remember:

- GLPs should only be in the hands of adults who fully understand their potential hazards
- Have a trusted friend help look out for on-coming air traffic
- Never point a GLP at any person, vehicle, aircraft, or wildlife
- Avoid using a GLP within 10 km of an airport
- Use the minimum power for the task (5 mW—30 mW)
- Store your GLP out of reach of children, and remove the batteries
