Dear Mr. Rae,

Thank-you for your letter of August 29. I was pleased to here that the Windsor Centre shows an interest in the Comet and Nova Section, and I am enclosing copies of the forms used. If any members are interested in taking part in the "search" part of this programme, let me know, and I will send more of these forms. I would also be interested in receiving results of any observations on the recent comets (Seki-Lines and Humason), if any members observed them.

The enclosed forms should explain the C & N section fairly well, but if there are any problems, please let me know. As you can see from C & N form #1, members of this section are asked to make a systematic search of selected regions of the sky, and if everything is normal in areas, negative reports are made out. Negative reports are important --- as they may be used at a later date to determine just when a nova or comet appeared in the region.

Best regards to you and the Centre.

Yours truly,

  
Jim Low
