Dear Mr. Buntain,

Many thanks for the latest reports of the Hamilton Centre. Keep up the good work.

It has been some time since I sent out a Bulletin, but I hope to get one out in the next month or so. In it, I expect to explain a new "search" programme of the C & N Section which may interest some observers. Since one or more observations are made on almost every night now, I hope to interest some observers in making naked eye searches of the dome each clear night (say -- covering stars down to third magnitude.). What do you think of the idea?

Best regards to you and the Centre.

Good observing,

Jim Low
