 14 Hermes St.  
 Athens (126), Greece

Dear Mr. Elias,

In reply to your letter published in the November "Sky and Telescope" I am sending you a list of magnitude estimates for Comets Ikeya and Alcock which I have received.

COMET IKEYA, 1963a

Date and U.T.	Magnitude	Instrument	Observer	Location
Feb. 25 00h.?	3.0	7 x 50 bin.	H. Maclean	Niagara Falls
29 00h.?	4.5	not given	H. Maclean	Niagara Falls
Mar. 6 00:00	1.6 (?)	not given	J. Matte	Quebec
8 00:40	4.6	7 x 35 bin.	J. Low	Montreal
16 00:40	5.5	3" Refr.	T. Dickinson	Toronto

COMET ALCOCK, 1963b

Date and U.T.	Magnitude	Instrument	Observer	Location
Apr. 4 06:15	fainter 7.5	8", 4½" refl.	H. Maclean	Niag. F.
June 1	4.0	4½" refl.	" "	" "
15	6.5	" "	" "	" "
16	6.5	" "	" "	" "
17	6.5	" "	" "	" "
18	6.6	" "	" "	" "
21	6.7	" "	" "	" "
22	6.8	" "	" "	" "
23 09:00	10.5 (?)	not given	A. Morehouse	Battle Creek
24	7.5	4½" refl.	H. Maclean	N. F. (U.S.A.)
25	8.0	" "	" "	" "

No information on comparison stars was given, however, it is my understanding that most observers used "out of focus" stars to estimate the magnitudes of the comets. The (?) means I have doubts about the estimates listed --- they seem way out of line. All observers are amateur astronomers.
